7	Strong Acidic water	pH 2.5	Disinfect and sterilize	<p>Alternative to harsh cleaning chemicals; kills germs and bacteria, sanitize hands, anti-bacterial, clean cuts</p> <p>Best to store water in dark containers and refrigerate it.</p>	

** When you start drinking alkaline water, normal side effects may include minor headaches, fatigue, muscle aches, runny nose, gas and softer stools. These side-effects are a good sign, as they are directly related to the detoxification that your body is undergoing. Side-effects will subside once your body has become accustomed to the water, anywhere from 2-3 days to 2-3 weeks, depending on each individual and the level of detoxification that the body needs to undergo.*
